

I am a software engineer, passionate about the web and new technologies around Javascript such as React, Vue and Deno.

I also do back-end and know how to model complete architectures in the form of micro-services / serverless especially with AWS. I recently learned Rust.

EXPERIENCE

PROJECT MANAGER

 JANUARY - JULY 2022

Put in production a loan eligibility scoring platform by migrating the backend from Symfony to Firebase, stabilizing the platform with Sentry.

FULL-STACK DEVELOPER

 SEPTEMBER 2020 - FEBRUARY 2021

Updated a loan eligibility scoring platform in Nuxt, with Symfony, Docker, Kubernetes, AWS DynamoDB/Lambda and MySQL.

FULL-STACK DEVELOPER

 ENEDIS  JANUARY - APRIL 2020

During this internship I realized a web and mobile application allowing to report environmental events with React, Typescript and Ionic.

REACT / THREE.JS DEVELOPER

 JULY - SEPTEMBER 2019

After my second internship, I was hired at VitiBot in a fixed-term contract to create a 3D plot editor with ThreeJS. It's a software made with Electron and React.

FULL-STACK DEVELOPER

 APRIL - JULY 2019

During a second internship at VitiBot, I redesigned the company's website to meet new needs with modern technologies such as Docker, kubernetes and continuous integration.

WEB DEVELOPER

 SEPTEMBER - OCTOBER 2018

During my second year internship, I created the showcase site for VitiBot, a startup in wine robotics, using HTML, CSS, JS, PHP and MySQL.

EDUCATION

SCHOOL OF COMPUTER ENGINEERING

 CESI.EI  2017-2022

Graduated with a degree in Computer Science Engineering with specialties in Data-Sciences and Innovation.
